

<b>SDG Goal 3</b>	<b>Good health and well-being</b>
<b>SDG Target 3.7</b>	<b>By 2030, ensure universal access to sexual and reproductive health-care services, including for family planning, information and education, and the integration of reproductive health into national strategies and programmes</b>
<b>SDG Indicator 3.7.2</b>	<b>Adolescent birth rate (aged 10-14 years; aged 15-19 years) per 1,000 women in that age group</b>
<b>Time series</b>	<b>Births of young women</b>

### 1. General information on the time series

- Date of national metadata: 23 May 2023
- National data: <http://sdg-indicators.de/3-7-2/>
- Definition: The time series measures the share of young women giving birth, expressed per 1,000 women of the same age group.
- Disaggregation: age of mother

### 2. Comparability with the UN metadata

- Date of UN metadata: March 2025
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-03-07-02.pdf>
- The time series is compliant with the UN metadata.

### 3. Data description

- The data on births of young women is based on a special evaluation from statistics of natural population change conducted by the Federal Statistical Office. The birth rate is calculated by the age method, which measures the age of the women at the time of giving birth per 1,000 women in the same age group.

The population data comes from the intercensal population updates, the basis of which is the last census conducted in 2011. The population data is rolled forward using statistical results on natural population change (births, deaths) and migrations. For 2010, the population was calculated backwards using the 2011 census and migration, birth and death statistics.

### 4. Access to data source

- Not available.
- Average population – GENESIS online 12411-0041:

### 5. Metadata on source data

- Quality Report – Birth Statistics (only available in German):  
<https://www.destatis.de/DE/Methoden/Qualitaet/Qualitaetsberichte/Bevoelkerung/geburten.pdf>

## 6. Timeliness and frequency

- Timeliness: t + 8.5 months
- Frequency: Annual

## 7. Calculation method

- Unit of measurement: Per 1,000 women of same age
- Calculation:

$$\text{Births of young women aged } i = \frac{\text{Women giving birth at the age of } i \text{ [number]}}{\text{Female population at the age of } i \text{ [number]}} \cdot 1,000$$

$i \in \{10 \text{ to under } 15 \text{ years}; 15 \text{ to under } 20 \text{ years}\}$
