SDG Goal 10	Reduced inequalities
SDG Target 10.c	By 2030, reduce to less than 3 per cent the transaction costs of migrant remittances and eliminate remittance corridors with costs higher than 5 per cent
SDG Indicator 10.c.1	Remittance costs as a proportion of the amount remitted
Time series	Remittance costs as a proportion of the amount remitted

1. General information on the time series

- Date of national metadata: May 26, 2026
- National data: https://sdg-indicators.de/10-c-1
- Definition: The time series shows the average costs of remittances based on a standardized transaction of 200 US dollars sent from Germany to different recipient countries.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: March 2026
- UN metadata: https://unstats.un.org/sdgs/metadata/files/Metadata-10-0C-01.pdf
- The time series is compliant with the UN metadata.

3. Data description

- The data are drawn from the World Bank's Remittance Prices Worldwide (RPW) database. The database covers 48 sending countries and 105 receiving countries, comprising a total of 365 remittance corridors. For corridors with Germany as the sending country, 26 receiving countries are included.

  The costs of remittances are collected for four main categories of remittance service providers (RSPs): banks, Money Transfer Operators (MTOs), mobile operators, and postal service providers.

  Service providers are selected to ensure a representative sample for each remittance corridor. The aim is to include providers that together account for at least 80 % of the market share within a given corridor.

  International remittances are cross-border person-to-person payments of relatively low value. They typically take the form of regular money transfers sent by migrants to their families in their countries of origin.

4. Access to data source

- Remittance Prices Worldwide:
  https://remittanceprices.worldbank.org/resources

5. Metadata on source data

- Remittance Prices Worldwide – Methodology:
  https://remittanceprices.worldbank.org/methodology

6. Timeliness and frequency

- Timeliness: t + 3 months
- Frequency: Until 2024: quarterly; since 2025: every six months

7. Calculation method

- Unit of measurement: Percentage
- Calculation:

$$\text{Remittance costs} = \frac{\sum_i \frac{\sum_j \frac{\substack{\text{Remittance costs for 200 US dollars} \\ \text{from Germany to receiving country}_i \\ \text{at financial institution}_j\ [\text{USD}]}}{200\ [\text{USD}]}}{\text{Concidered financial institutions [Number]}}}{\text{Concidered country corridors [Number]}} \cdot 100\ [\%]$$

With:
i = Receiving country
j = Financial institution
