SDG Goal 17	Partnerships for the goals
SDG Target 17.18	By 2020, enhance capacity-building support to developing countries, including for least developed countries and small island developing States, to increase significantly the availability of high-quality, timely and reliable data disaggregated by income, gender, age, race, ethnicity, migratory status, disability, geographic location and other characteristics relevant in national contexts
SDG Indicator 17.18.1	Statistical capacity indicators
Time series	Sustainable development indicators with achieved disaggregation when relevant to the indicator title

1. General information on the time series

- Date of national metadata: 17 May 2024

- National data: http://sdg-indicators.de/17-18-1/

- Definition: The time series show the proportion of sustainable development indicators for Germany that fully, partially or not at all correspond to the required disaggregations. Relevant disaggregations are those that are explicitly mentioned in the title of the indicator. Based on this principle, a relevant disaggregation is usually defined as any classification that follows "by" in the title of the indicator, for example "by age and gender". This working definition excludes cases where the title of the indicator contains sub-indicators, such as indicator 3.5.1 - 'Coverage of treatment interventions (pharmacological, psychosocial and rehabilitation and aftercare services) for substance use disorders' - treatment interventions are a sub-indicator rather than a disaggregation. Also excluded are all references to the sample for which the indicator requires data. For example, Indicator 5.3.1 - 'Proportion of women aged 20-24 years who were married or in a union before age 15 and before age 18' - gender and age are not disaggregations, but the sample required for the indicator.

- Disaggregation: completeness of disaggregation; goal

2. Comparability with the UN metadata

- Date of UN metadata: March 2024

- UN metadata: https://unstats.un.org/sdgs/metadata/files/Metadata-17-18-01a.pdf

- The time series is not compliant with the UN metadata, but provides additional information.

3. Data description

- 52 indicators were identified as containing specific disaggregations within the title. This number was used as the denominator for calculating the proportion of indicators with ahieved full or partial disaggregation. The number of reported indicators on the German SDG platform that fully, partially or not at all achieve the disaggregation identified in their title are divided by the total number of indicators identified to contain disaggregation in their title. The data represents the situation at the beginning of the respective reporting year.

4. Access to data source

- Not available.

5. Metadata on source data

- Not available.

6. Timeliness and frequency

- Timeliness: t + 1 month
- Frequency: Annual

7. Calculation method

- Unit of measurement: Percentage
- Calculation:

$$\begin{array}{c}\textbf{Indicators}\\ \textbf{[with]/[with partly]/[without]}\\ \textbf{achieved disaggregation}\end{array} = \frac{\begin{array}{c}\text{Indicators}\\ \text{[with]/[with partly]/[without]}\\ \text{achieved disaggregation [number]}\end{array}}{\begin{array}{c}\text{Indicators in whose title one or more}\\ \text{disaggregations are required [number]}\end{array}} \cdot 100\%$$
