

SDG Goal 7

Affordable and clean energy

SDG Target 7.b

By 2030, expand infrastructure and upgrade technology for supplying modern and sustainable energy services for all in developing countries, in particular least developed countries, small island developing States and landlocked developing countries, in accordance with their respective programmes of support

SDG Indicator 7.b.1

Installed renewable energy-generating capacity in developing and developed countries (in watts per capita)

Time series

Installed renewable energy-generating capacity

1. General information on the time series

- Date of national metadata: July 6, 2026
- National data: <https://sdg-indicators.de/7-b-1>
- Definition: The time series shows the installed renewable energy-generating capacity per capita.
- Disaggregation: Not available.

2. Comparability with the UN metadata

- Date of UN metadata: March 2024
- UN metadata: <https://unstats.un.org/sdgs/metadata/files/Metadata-07-0b-01.pdf>
- The time series is compliant with the UN metadata.

3. Data description

- The data for the installed renewable energy-generating comes from the International Renewable Energy Agency (IRENA). It represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity.

The data reflects the capacity installed and connected at the end of the calendar year. Electricity generation (GWh) is the gross electricity produced by electricity plants, combined heat and power plants (CHP) and distributed generators measured at the output terminals of generation. It includes on-grid and off-grid generation, and it also includes the electricity self-consumed in energy industries; not only the electricity fed into the grid (net electricity production).

For the calculation of population data, the retroactively calculated population on 31 December provided by the Federal Statistical Office is used. For 2010, this is based on the 2011 census as well as migration, birth, and death statistics; for the years 2012 to 2021, the calculation is based on the 2022 census.

4. Access to data source

- Installed renewable electricity capacity:

5. Metadata on source data

- Not available.

6. Timeliness and frequency

- Timeliness: Not available.
- Frequency: Annual

7. Calculation method

- Unit of measurement: Watts per capita
- Calculation: Not applicable.
